EXCELLENCE IN ROLLER TECHNOLOGY
– TURNING CHALLENGES INTO SOLUTIONS

MITEX DECOTECH

INNOVATION FOR APPLICATION ROLLERS

The MITEX DECOTECH coating enables precise color transfer through an extremely soft roller cover with special release properties – efficient, durable, and with uniform application in production.

Economic efficiency: Increased efficiency by avoiding „overspray“

Application: Excellent spreading of paint or adhesive for defined application amounts

New possibilities: Soft roller cover allows coating of deep 3D surfaces in roller application

Durable: Through extreme wear-resistance more reliable than foam rubber covers

Versatile variants: Fully configurable coating system

Benefit from your advantage:

Tell us your requirements, we will develop your roller concept.

APPLICATION EXAMPLES OF DECOTECH

The MITEX DECOTECH product line enables use with application rollers, for example for lacquer or adhesive. Thanks to the extremely homogeneous and soft material, 3D geometries can be coated.

Examples include painting of furniture, floors, and structured surfaces as well as adhesive application. Used also for example for pharmaceutical applications.

Mögliche Varianten:

- › Hardness range from 5°A to 40°A
- › High temperature application range through special polymer
- › Food compliant FDA / BfR
- › Extremely mechanically resistant

ADDED VALUE FOR YOUR PRODUCTION

› EFFICIENT:

Significant reduction of paint application quantities compared to spray systems.

› PROVEN SYSTEM:

Established and tested for versatile applications.

› UNIQUE:

DECOTECH is an innovative product that enables new production processes.
