

# MITEX HIGHRELEASE

## HIGHEST ANTI-ADHESION

The HIGHRELEASE silicone coating series offers the highest possible release properties. Adhesion to the coating is avoided, enabling new processes.

**Product release:** Persistent and best release properties, even with cuts

**Temperature-resistant:** Usable under high continuous loads

**Durable:** Extremely good recovery, limited mechanics

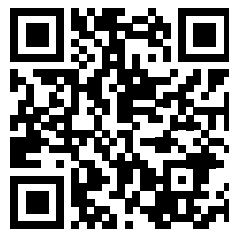

**Low-maintenance:** Prevents agglomerates and associated cleaning effort and waste

**Versatile variants:** Fully configurable coating system

### Benefit from your advantage:

Tell us your requirements, we will develop your roller concept.

## APPLICATION EXAMPLES OF HIGHRELEASE

This product line enables use at high temperatures while simultaneously providing excellent release properties (anti-adhesiveness).

Examples include guide rollers, cast film or hot melt extrusion, lamination and embossing processes. Also used for lamination or as deflection rollers behind dryers.

### Examples for configurations:

- › Hardness range from 45°A to 85°A
- › Low wall thickness up to approx. 1 mm possible
- › Electrically and thermally conductive
- › Available in white

### ADDED VALUE FOR YOUR PRODUCTION

#### › CRUCIAL FOR PROCESS:

Unique and unmatched anti-adhesion enables new process windows.

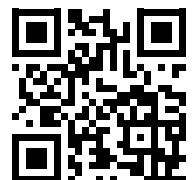

#### › AVOIDS FOREIGN BODIES:

Prevents adhesive buildup and necessary cleaning.

#### › RESISTANCE:

We will gladly test the suitability for your process free of charge.
